# EXOPLANETS AROUND ULTRACOOOL DWARFS

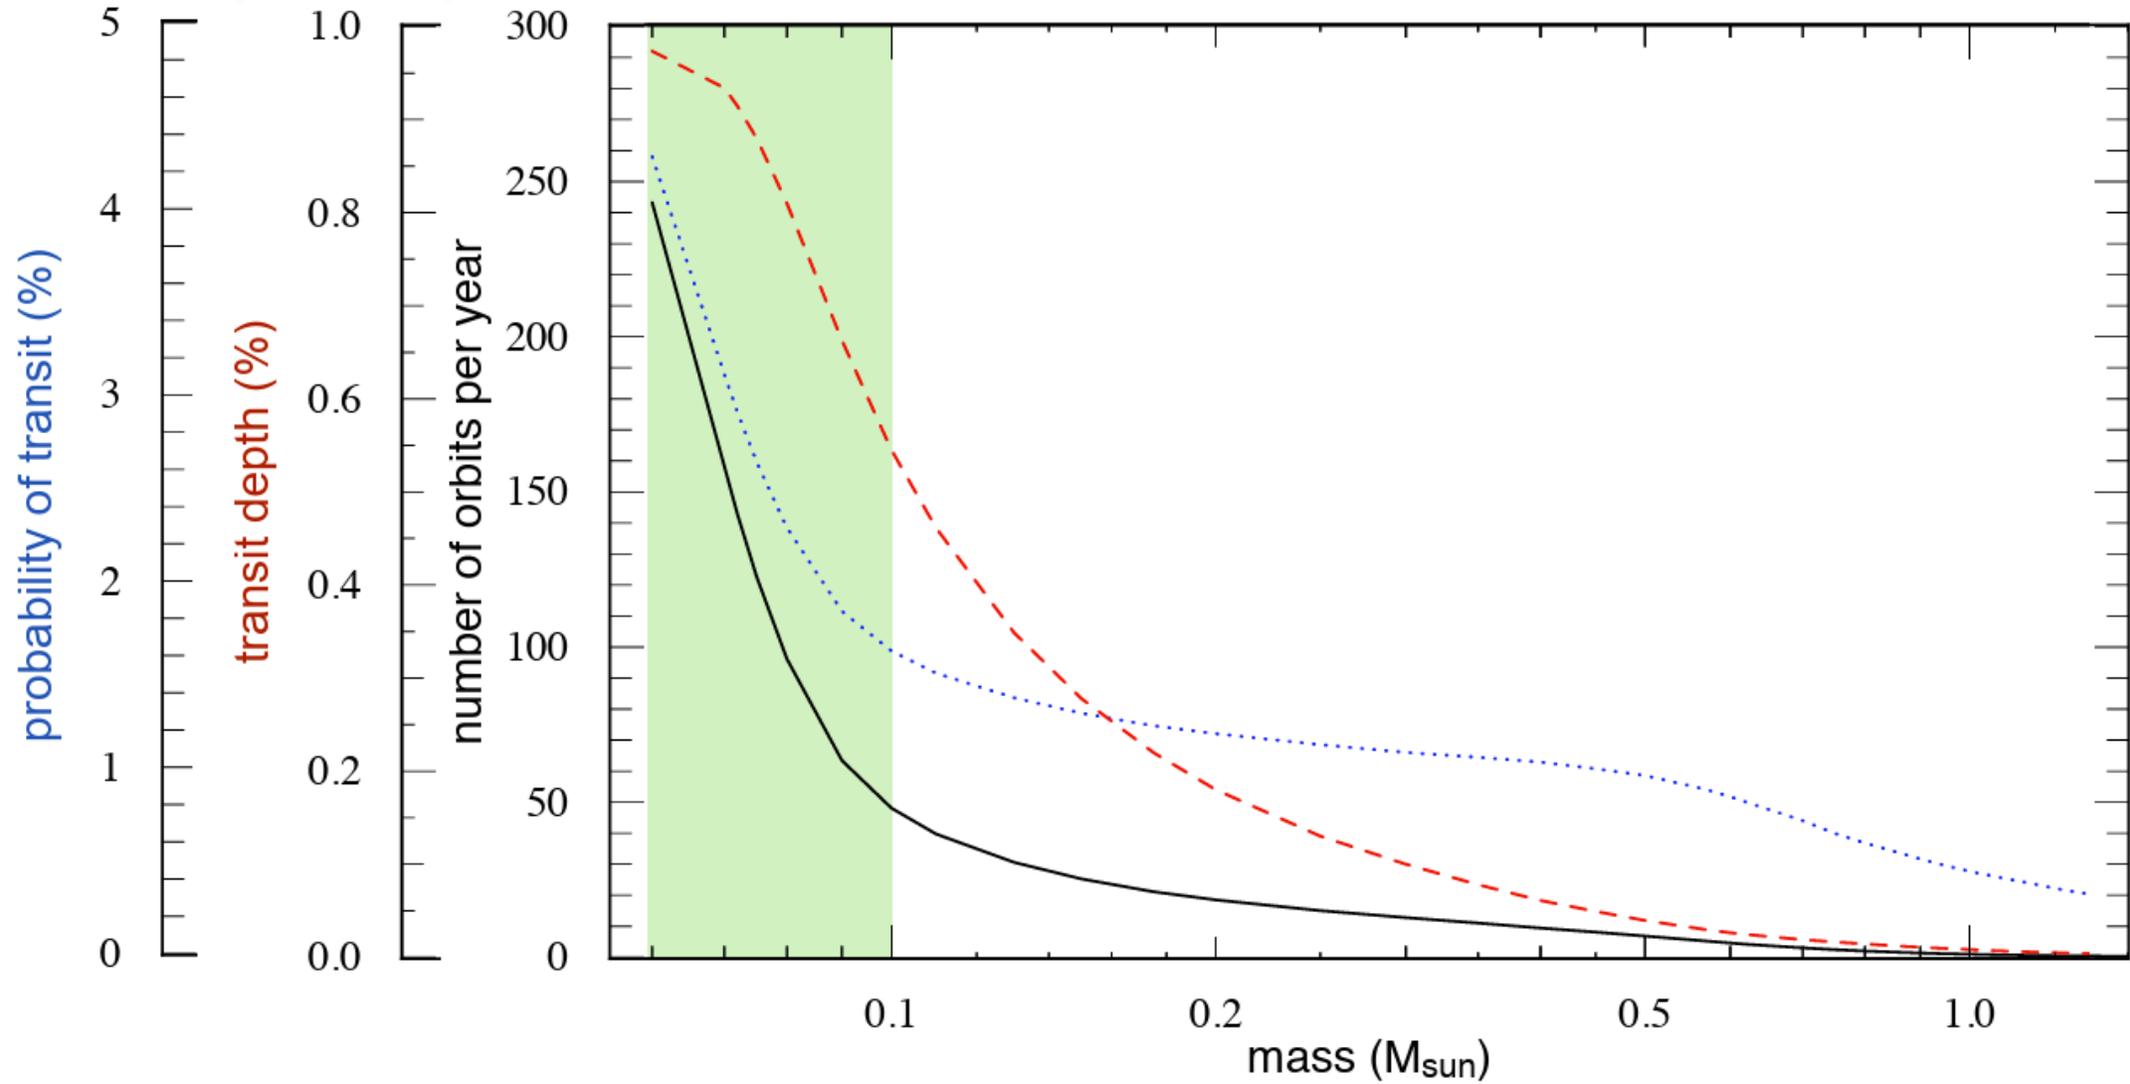

UCDs are M6.0 and later stars and sub-stellar objects (BDs)

They usually host small-rocky exoplanets and have a close Habitable Zone. On top of that, they have a relatively big planet-to-star radii ratio, which makes things easier for transits and atmosphere characterization

*UCDs are indeed very cool objects for understanding exoplanets, planet formation (rocky planets, Jupiter-like planets, ...) and are specially interesting in the search for life*

# EXOPLANETS AROUND ULTRACOOL DWARFS

# EXOPLANETS AROUND ULTRACOOOL DWARFS

Only four planetary systems have been detected: **SPECULOOS-3** and 2, Trappist-1, and Teegarden's star

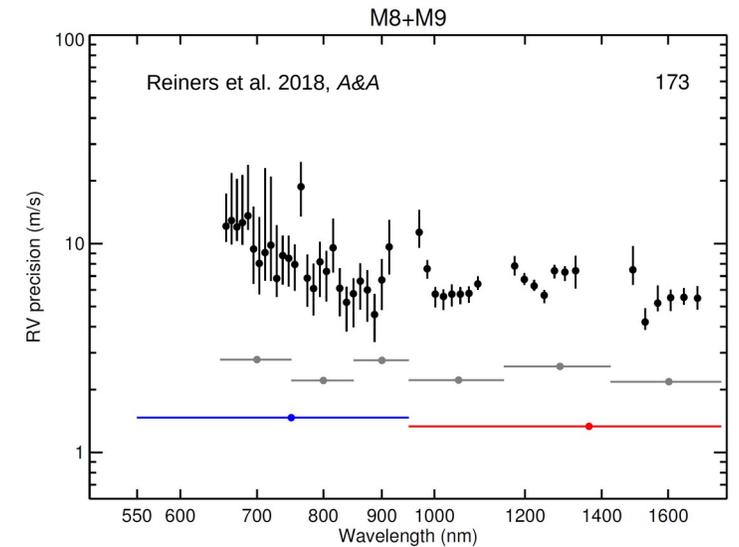

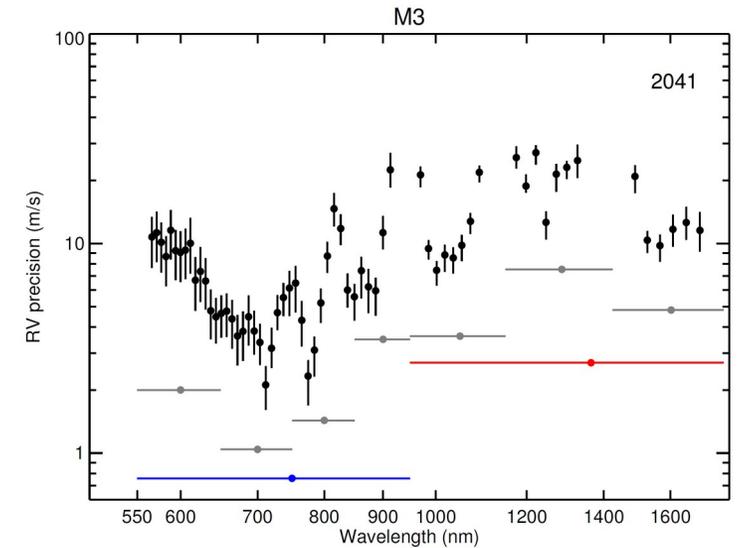

**Faint stars:** low signal to noise ratio

The flux peaks in **NIR**

Less spectral information in the NIR than in the VIS

**Small planets**, inducing small RV

Active and "fast" rotating stars

# SPECULOOS (Search for Planets EClipsing ULtra-cOOl Stars)

## SPECULOOS-South (SSO)

*Hosted by the European Southern Observatory (ESO) of Paranal in the Atacama Desert of Chile, SPECULOOS-South is composed of four robotic telescopes in operation since January 2019.*

*4 telescopes of 1m diameter and is equipped with an astronomical camera highly sensitive in the very-near-infrared' (up to  $\sim 0.9$  microns).*

# SPECULOOS (Search for Planets EClipping ULtra-cOOl Stars)

## SPECULOOS-North (SNO)

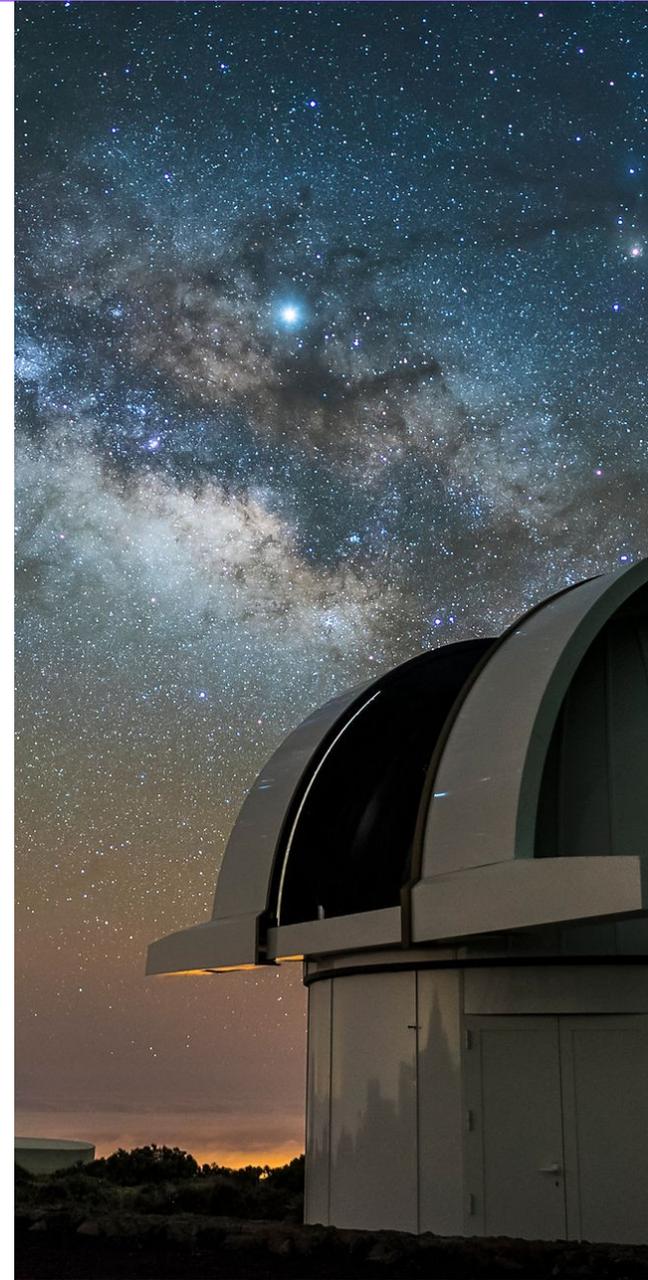

*SPECULOOS-North is the Northern counterpart of SPECULOOS-South. It is located at Teide Observatory in the island of Tenerife (Canaries) and National Astronomical Observatory of Mexico, in San Pedro Mártir (SAINT-EX)*

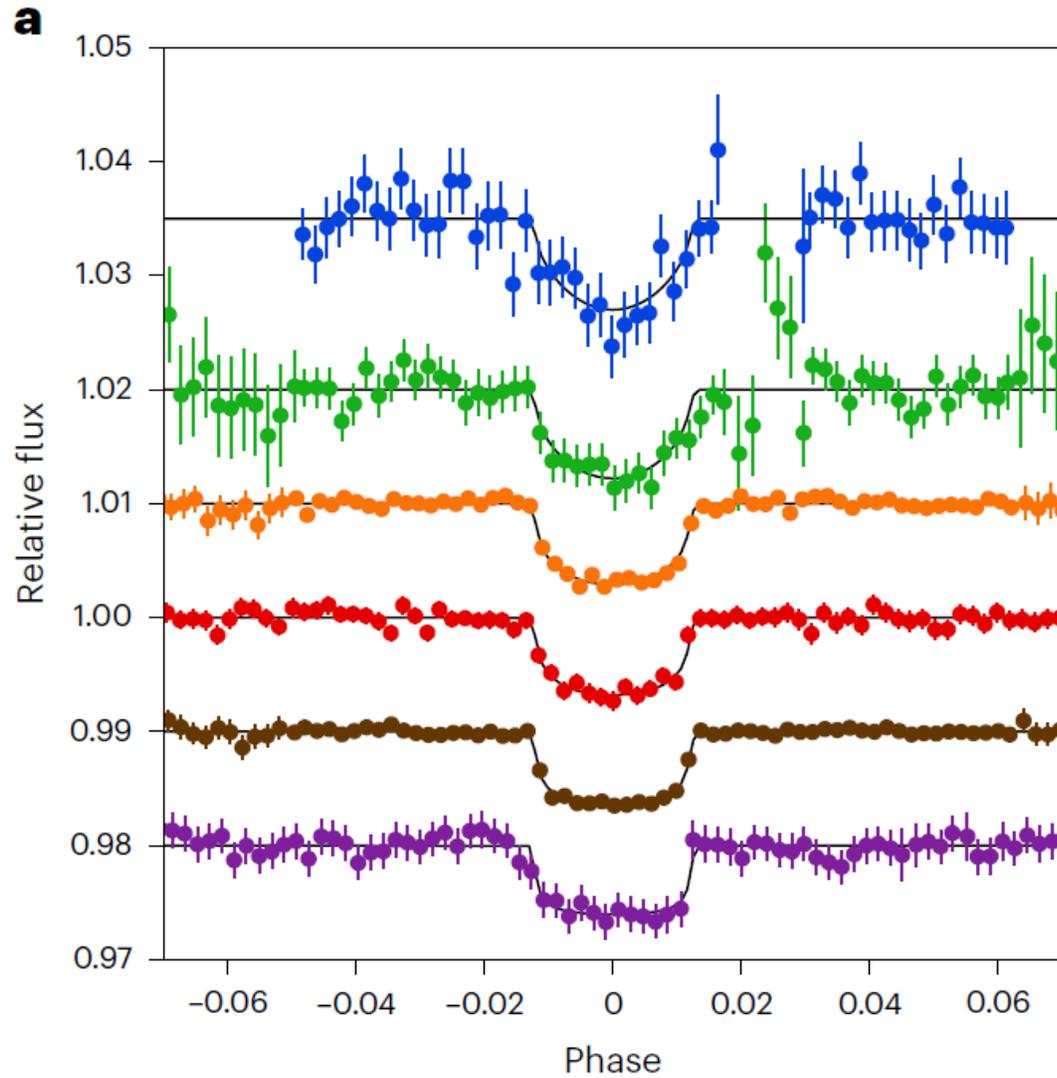

# SPECULOOS (Search for Planets EClipping ULtra-cOOl Stars)

SPECULOOS aims to find the most suitable terrestrial planets for detailed atmospheric characterisation by future giant observatories, such as ELT and JWST.

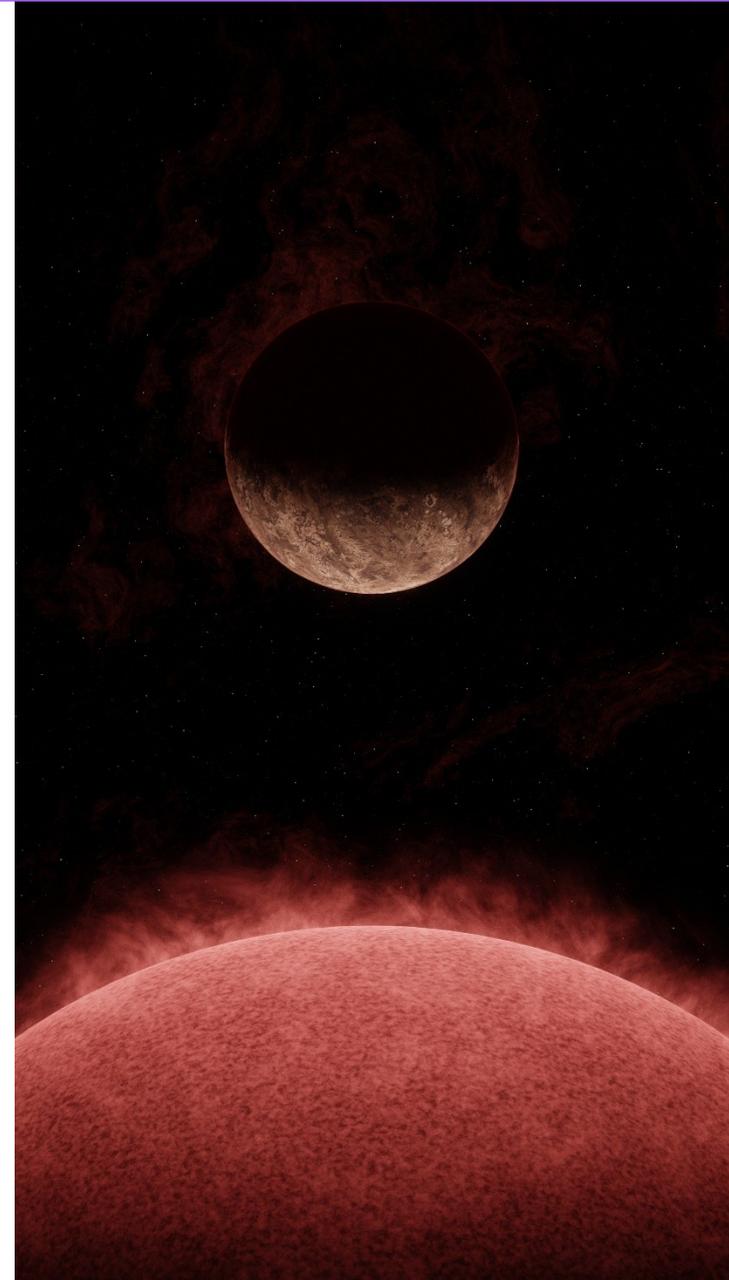

The project was born in 2011 as a prototype on the TRAPPIST-South telescope in Chile. This prototype discovered TRAPPIST-1 (= *SPECULOOS-1*) composed of seven earth-like planets. In 2022, it discovered a planet around SPECULOOS-2 (Delrez et al. 2022), and in 2024 SPECULOOS-3 (Gillon et al. 2024).

# SPECULOOS-3b

SAINT-EX, SNO-Artemis, GTC/HiPERCAM, and UKIRT/WFCAM observations

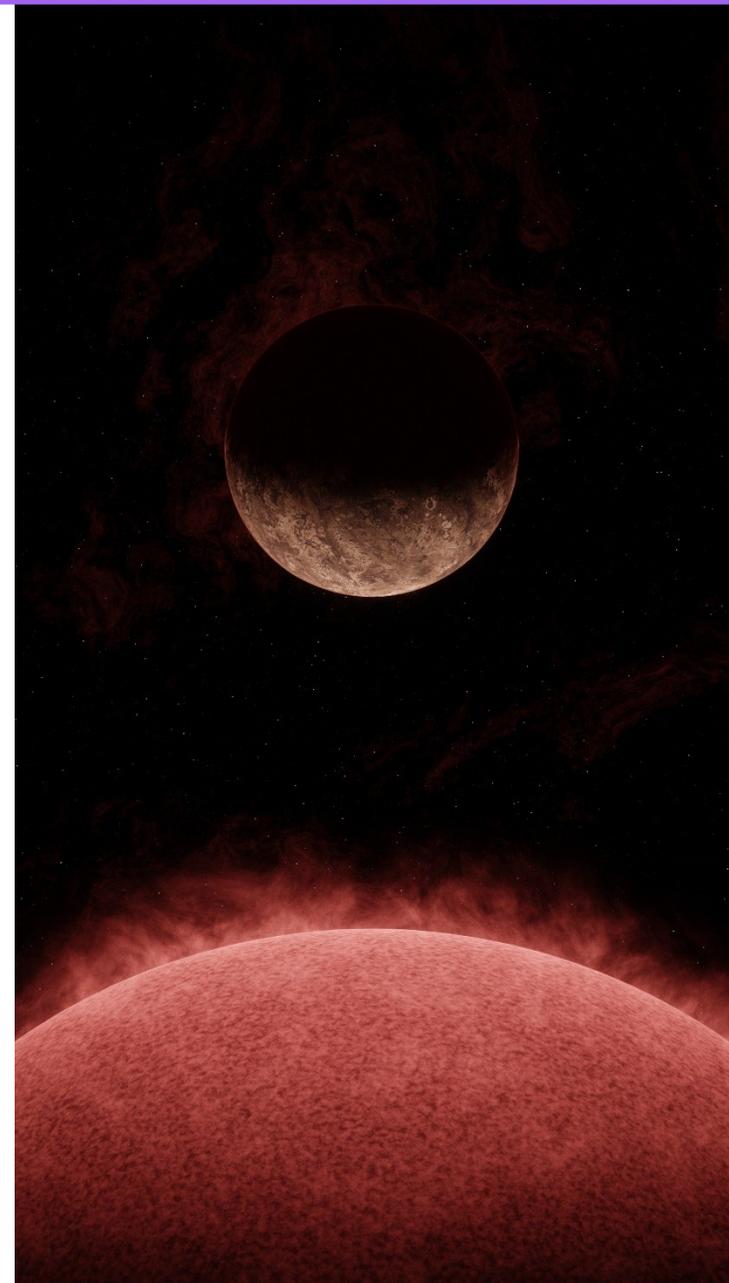

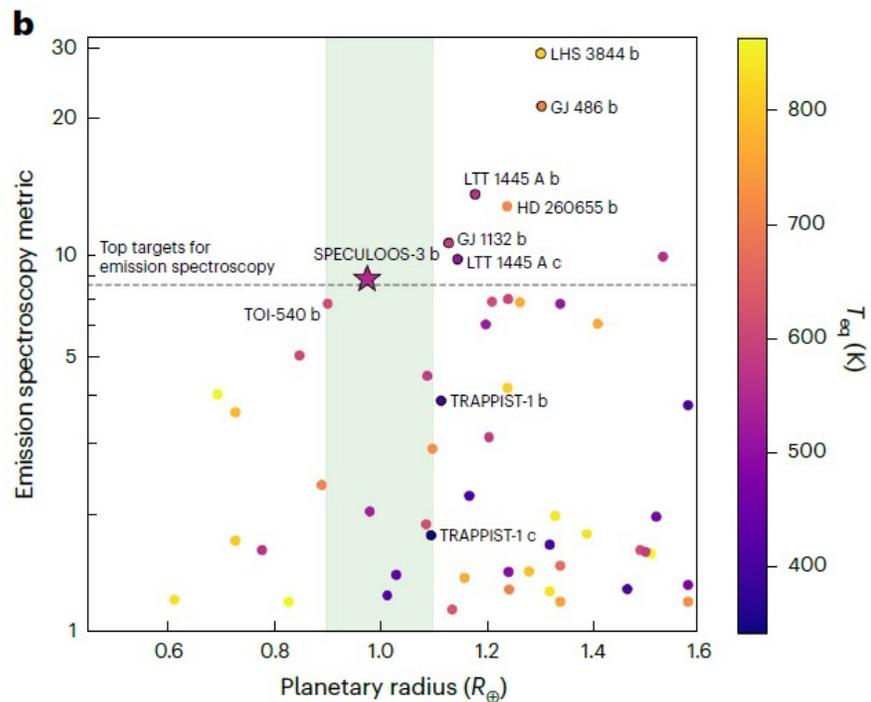

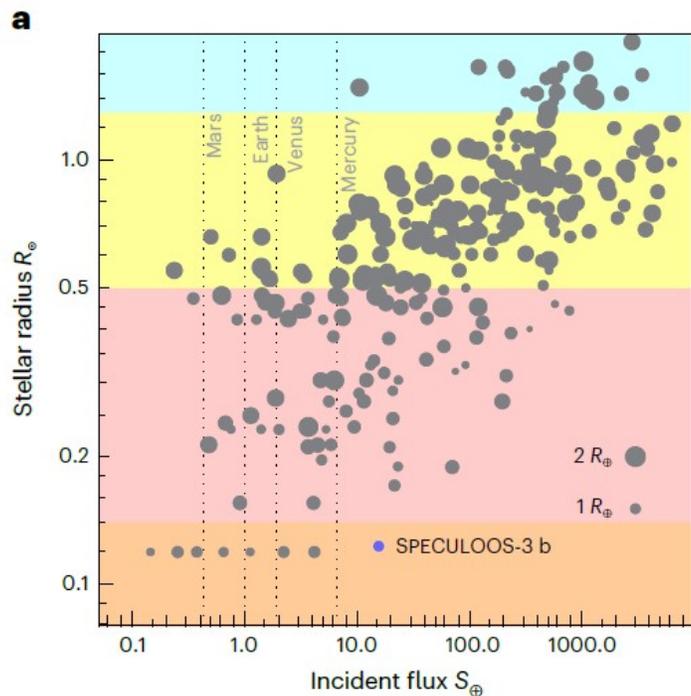

# SPECULOOS-3b

## Stellar Parameters: SPECULOOS-3<sup>a,b</sup>

SpT	M6.5V
$T_{\text{eff}}$ (K)	$2680 \pm 60$
$R_{\star}$ ( $R_{\odot}$ )	$0.1342 \pm 0.0062$
$M_{\star}$ ( $M_{\odot}$ )	$0.101 \pm 0.002$
$Z_{\text{mag}}$	$18.93 \pm 0.02$
$Y_{\text{mag}}$	$18.40 \pm 0.04$
$J_{\text{mag}}$	$11.50 \pm 0.02$
$H_{\text{mag}}$	$10.87 \pm 0.02$
$Ks_{\text{mag}}$	$10.54 \pm 0.02$

## Planetary Parameters: SPECULOOS-3b<sup>a</sup>

$R_{\text{P}}$ ( $R_{\oplus}$ )	$0.977 \pm 0.022$
$P_{\text{orb}}$ (days)	$0.719 \pm 5.7 \times 10^{-7}$
$\Delta F$ (ppm) <sup>c</sup>	$5291 \pm 116$

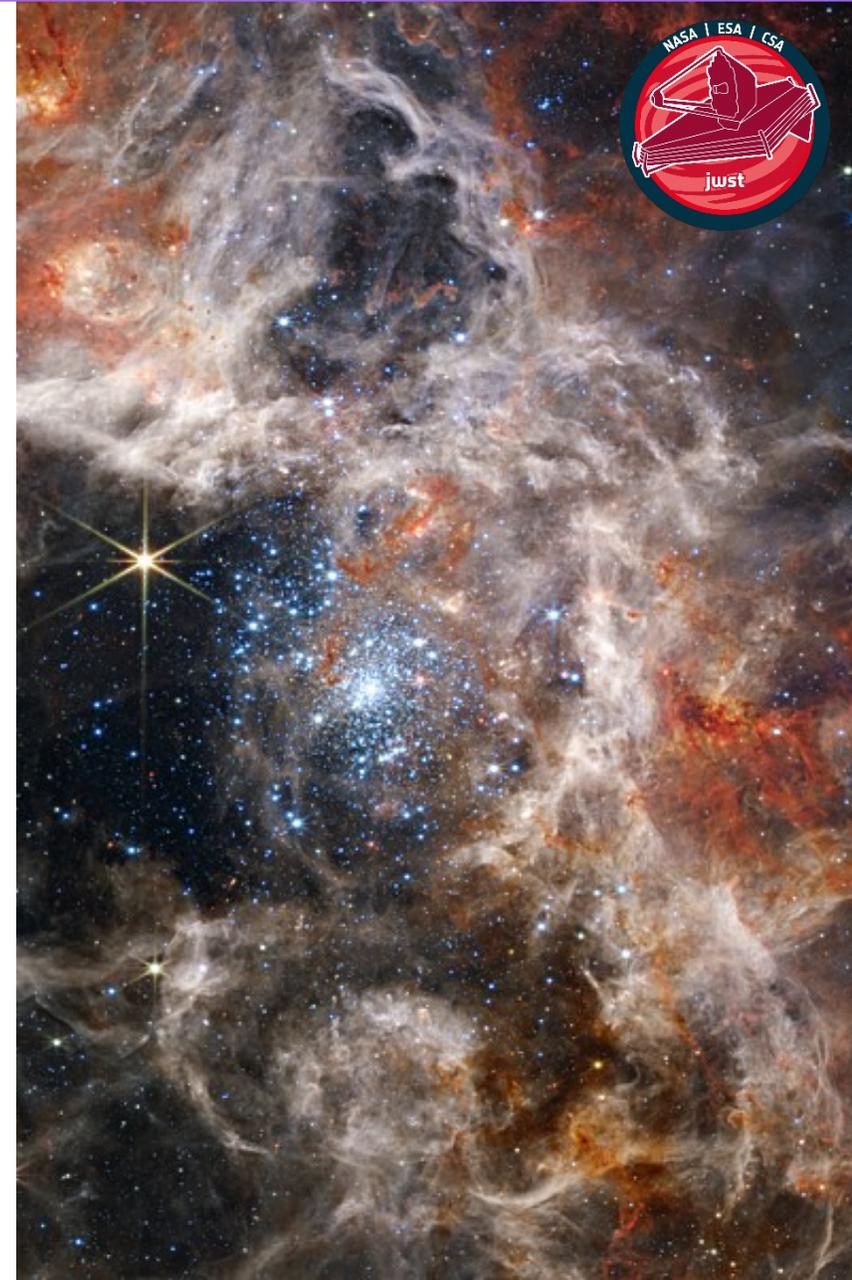

# JWST and spectroscopic campaigns

The targets JWST is prioritizing are late M-dwarfs with known exoplanets, because atmospheric characterisation is easier. Is the case of Trappist-1, with many hours of observations. SPECULOOS-3 is also going to be extensively observed.

Several spectroscopic campaigns have been monitoring SPECULOOS-3, such as CARMENES, and more will be done

Future infrastructures, such as ANDES-ELT, will be crucial to characterize these systems

# JWST and spectroscopic campaigns

Several spectroscopic campaigns have been monitoring SPECULOOS-3, such as CARMENES, and more will be done

Future infrastructures, such as ANDES-ELT, will be crucial to characterize these systems

# Probing SPECULOOS-3b with PANIC

With this proposal, we aim to evaluate the performance of the **PANIC** instrument for high-precision time-series photometry in the near-infrared, in order to assess its suitability **as a northern facility for the SPECULOOS project.**

The five filters (z, Y, J, H, Ks) will be tested to see the suitability of PANIC for this type of observations.

<b>Planetary Parameters: SPECULOOS-3 b<sup>a</sup></b>	
$R_P (R_\oplus)$	$0.977 \pm 0.022$
$P_{\text{orb}} (\text{days})$	$0.719 \pm 5.7 \times 10^{-7}$
$\Delta F (\text{ppm})^c$	$5291 \pm 116$
<b>Stellar Parameters: SPECULOOS-3<sup>a,b</sup></b>	
SpT	M6.5 V
$T_{\text{eff}} (\text{K})$	$2680 \pm 60$
$R_\star (R_\odot)$	$0.1342 \pm 0.0062$
$M_\star (M_\odot)$	$0.101 \pm 0.002$
$Z_{\text{mag}}$	$18.93 \pm 0.02$
$Y_{\text{mag}}$	$18.40 \pm 0.04$
$J_{\text{mag}}$	$11.50 \pm 0.02$
$H_{\text{mag}}$	$10.87 \pm 0.02$
$Ks_{\text{mag}}$	$10.54 \pm 0.02$

<sup>c</sup> Transit depth.

# PANIC OBSERVATIONAL STRATEGY

Probing SPECULOOS-3b with PANIC: Toward a Northern Infrared Facility for SPECULOOS (25B-2.2-034)

Target: Speculoos-3 (M6.5)

RA=20:49:27.44

DEC=+33:36:50.96

**17 October:** SPECULOOS-3b transit

ingress 20:13— midtransit 20:26— egress 20:40

Start: 19:40; end: 21:10

filter: z

Exposure time: 60sec

**18 October:** SPECULOOS-3 monitoring

Start: 20:00; end: 21:30

filter: Y

Exposure time: 60sec

**19 October:** SPECULOOS-3b transit

ingress 23:59— midtransit 00:13— egress 00:27

Start: 23:30; end: 01:00

filter: J

Exposure time: 60sec

**20 October:** SPECULOOS-3 monitoring

Start: 20:00; end: 21:30

filter: H

Exposure time: 60sec

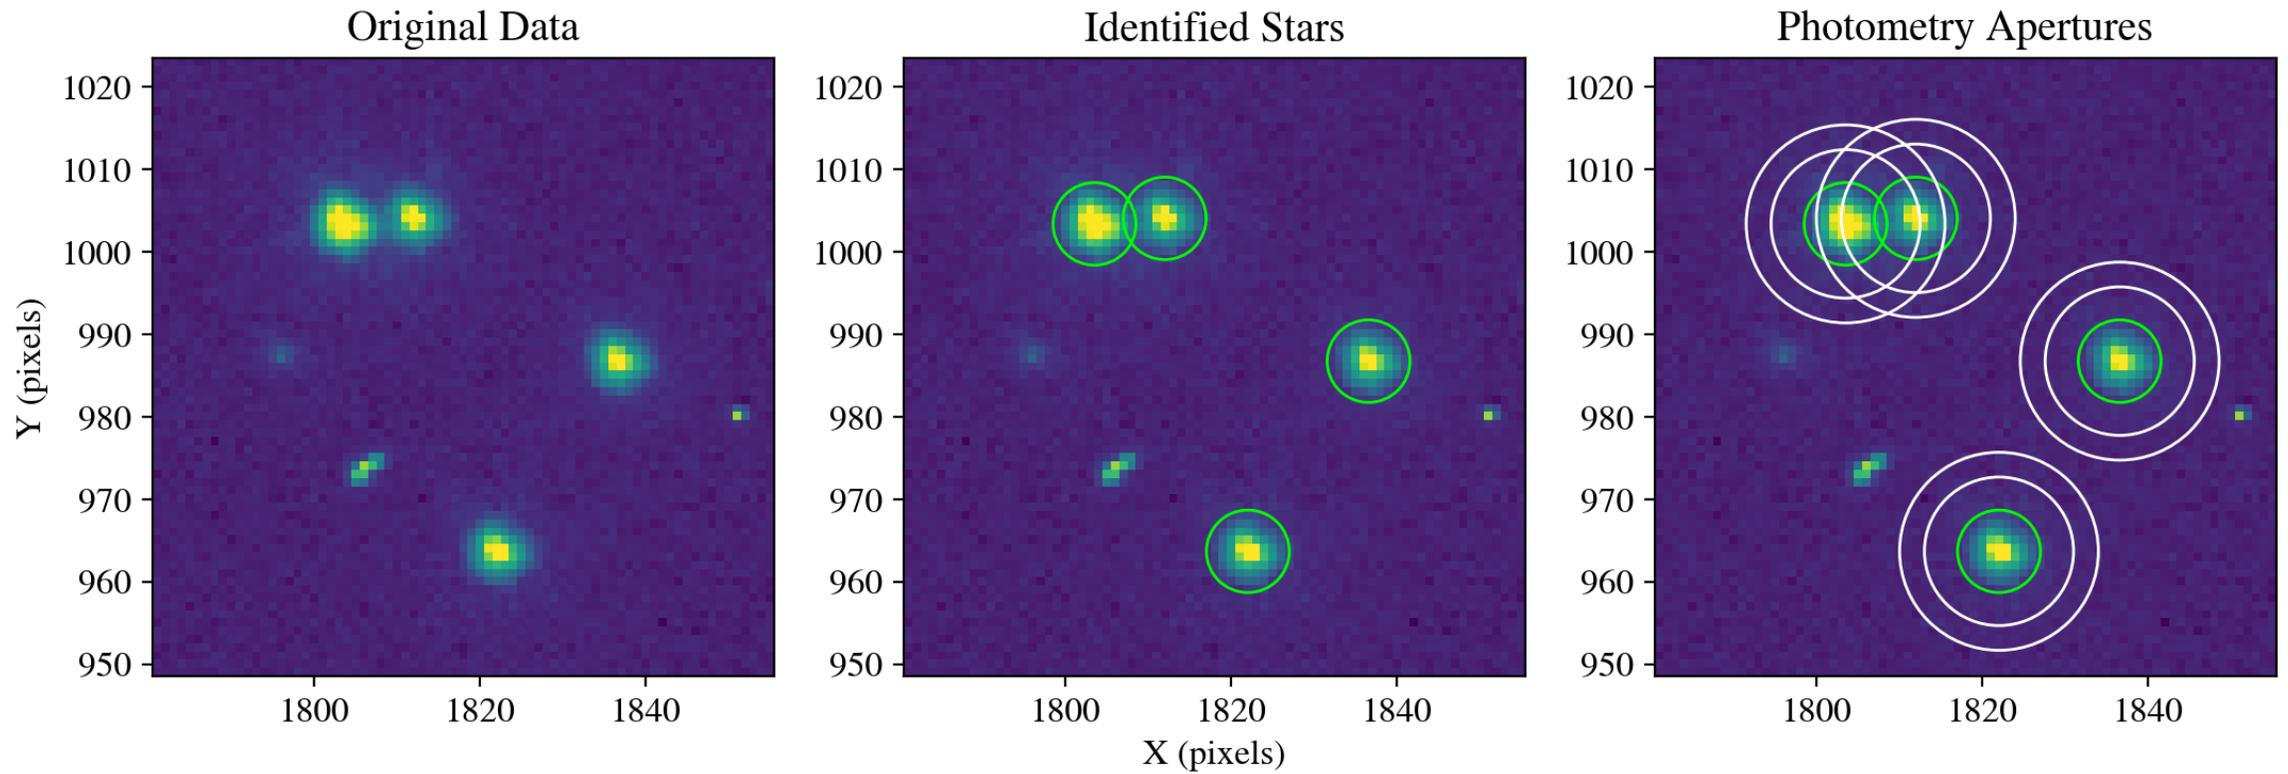

**21 October:** SPECULOOS-3 monitoring

Start: 20:00; end: 21:30

filter: Ks

Exposure time: 60sec
